- 09/5-77 637
- 1** Hints for computer system design 100%
 Butler W. Lampson
Proceedings of the ninth ACM symposium on Operating systems principles
-October 1983
Experience with the design and implementation of a number of computer systems, and study of many other systems, has led to some general hints for system design which are described here. They are illustrated by a number of examples, ranging from hardware such as the Alto and the Dorado to applications programs such as Bravo and Star.
 - 2** 4.2BSD and 4.3BSD as examples of the UNIX system 100%
 John S. Quarterman , Abraham Silberschatz , James L. Peterson
ACM Computing Surveys (CSUR) December 1985
Volume 17 Issue 4
This paper presents an in-depth examination of the 4.2 Berkeley Software Distribution, Virtual VAX-11 Version (4.2BSD), which is a version of the UNIX Time-Sharing System. There are notes throughout on 4.3BSD, the forthcoming system from the University of California at Berkeley. We trace the historical development of the UNIX system from its conception in 1969 until today, and describe the design principles that have guided this development. We then present the internal data structures and ...
 - 3** File servers for network-based distributed systems 100%
 Liba Svobodova
ACM Computing Surveys (CSUR) December 1984
Volume 16 Issue 4
 - 4** Abstracts—nuclear reactor codes 100%

-  Virginia Nather , Ward Sangren
Communications of the ACM January 1959
Volume 2 Issue 1
- 5** Proving theorems by pattern recognition I 100%
 Hao Wang
Communications of the ACM April 1960
Volume 3 Issue 4
- 6** The simulation of time sharing systems 100%
 Norman R. Nielsen
Communications of the ACM July 1967
Volume 10 Issue 7
The development of new large scale time-sharing systems has raised a number of problems for computation center management. Not only is it necessary to develop an appropriate hardware configuration for these systems, but appropriate software adjustments must be made. Unfortunately, these systems often do not respond to changes in the manner that intuition would suggest, and there are few guides to assist in the analysis of performance characteristics. The development of a comprehensive simul ...
- 7** The Recovery Manager of the System R Database Manager 100%
 Jim Gray , Paul McJones , Mike Blasgen , Bruce Lindsay , Raymond Lorie , Tom Price , Franco Putzolu , Irving Traiger
ACM Computing Surveys (CSUR) June 1981
Volume 13 Issue 2
- 8** Associative and Parallel Processors 100%
 Kenneth J. Thurber , Leon D. Wald
ACM Computing Surveys (CSUR) December 1975
Volume 7 Issue 4
- 9** Elements of Data Management Systems 100%
 George G. Dodd
ACM Computing Surveys (CSUR) June 1969
Volume 1 Issue 2
- 10** MEMS-based integrated-circuit mass-storage systems 100%
 L. Richard Carley , Gregory R. Ganger , David F. Nagle
Communications of the ACM November 2000
Volume 43 Issue 11
- 11** Strategic directions in storage I/O issues in large-scale computing 100%
 Garth A. Gibson , Jeffrey Scott Vitter , John Wilkes
ACM Computing Surveys (CSUR) December 1996
Volume 28 Issue 4

12 The HP AutoRAID hierarchical storage system 100%

 John Wilkes , Richard Golding , Carl Staelin , Tim Sullivan
ACM Transactions on Computer Systems (TOCS) February 1996
Volume 14 Issue 1

Configuring redundant disk arrays is a black art. To configure an array properly, a system administrator must understand the details of both the array and the workload it will support. Incorrect understanding of either, or changes in the workload over time, can lead to poor performance. We present a solution to this problem: a two-level storage hierarchy implemented inside a single disk-array controller. In the upper level of this hierarchy, two copies of active data are stored to provide f ...

13 Query evaluation techniques for large databases 100%

 Goetz Graefe
ACM Computing Surveys (CSUR) June 1993
Volume 25 Issue 2

Database management systems will continue to manage large data volumes. Thus, efficient algorithms for accessing and manipulating large sets and sequences will be required to provide acceptable performance. The advent of object-oriented and extensible database systems will not solve this problem. On the contrary, modern data models exacerbate the problem: In order to manipulate large sets of complex objects as efficiently as today's database systems manipulate simple records, query-processi ...
